

natural DECK OIL®

PROTECTIVE PENETRATING WOOD OIL

ACIETE PENETRANTE Y PROTECTIVO PARA MADERA • HUILE QUI PENETRE ET PROTEGE LE BOIS

NATURAL DECK OIL™ completes the BIO-WASH® TOTAL WOOD CARE SYSTEMS line of products. This penetrating natural oil wood finish has all the benefits of using a true wood oil, yet it offers easy water clean up, no odor, flexibility for use on wood with any level of moisture content. It can be used in low temperature applications for poor weather conditions and has a fast dry time for re-coating the same day. NATURAL DECK OIL™ is best suited for high wear surfaces such as decks, stairs, railings, fences, shake roofs and for customers who desire a penetrating wood finish. It is designed to provide easy application and very simple maintenance. As a penetrating natural oil, NATURAL DECK OIL™ penetrates deep into the wood protecting it from the elements. This penetrating feature allows it to protect the wood while tolerating high levels of traffic, where a film build would be quickly worn away.

Drawing from years of field work in removing failed coatings from wood surfaces, our technical expertise has enabled us to formulate this simple to use, yet effective solution for high wear surfaces, these surfaces can require frequent maintenance. Depending on the exposure, this can be an annual event and eventually lead to product build-up in the non-wear areas. NATURAL DECK OIL™ has allowed for this aspect of wood care by its formula and the clear, **Natural Tone System™ (NTS®)**; it offers superior protection as it does not succumb to the failings of typical deck stains, such as: pooling, build up, cracking, peeling and uneven appearance.

NATURAL DECK OIL™ contains natural ingredients similar to the original oils found in wood. This technology in turn provides remarkable protection against the elements, very much like when the wood was part of a living tree.

NATURAL DECK OIL™ features our exclusive NTS® system, consisting of transparent-oxide pigments, the clearest natural pigments available and found only in expensive, "high-end" coatings. This system can provide any natural wood tone the customer may desire. We have matched the natural color of wood in its fresh cut state with our own NTS® system. The resulting 'tones' are the four most desired colors for decks today.

FEATURES, FACTS AND BENEFITS

Protect New Wood Immediately

Due to the unique formulation of NATURAL DECK OIL™ and MILL GLAZE AWAY®, new wood can now be coated the day it is installed. In the past, wood coatings required dry wood, free of any mill glazing. Most wood stains require three to six month aging period before application on smooth wood, such as fence, siding and decking material. The problem is that within that time period the wood lost a great deal of its natural beauty and integrity. (see independent study) By protecting the wood immediately, its natural beauty is preserved and the life of the wood is greatly extended.

Damp Wood

NATURAL DECK OIL™ does not require perfectly dry wood for application. Most wood coatings cannot be applied to a wood surface with a high moisture content. This creates delays in applying the vital protection a wood surface requires to protect it from the elements. Lumber is no longer part of a living tree and mother nature is determined to break it down so it can become part of the cycle of life. Requiring only a dry surface, NATURAL DECK OIL™ can be applied to wood with any level of moisture content. Once the product dries it creates a unique breathable barrier allowing excess trapped moisture to escape while preventing rain and physical water drops to enter the wood. This unique feature is evident by the exemplary water beading quality of NATURAL DECK OIL™ and its ability to protect wood from the damaging effects of water and trapped moisture.

No More Toxic Solvents

None of the BIO-WASH® products contain toxic solvents. Our water based wood preparation, cleaning and restoring products have always led the industry for their safety, biodegradability and ease of use. NATURAL DECK OIL™ and SUPERNATURAL® are both water borne products. Both wood finishes share the same qualities: water clean up (and this means cold water, not hot water with soap), no harmful fumes and no Material Safety Data Sheets (MSDS). The ingredients are not harmful and as a result pose no risk to the person working with them. This makes use of the product a pleasure and takes the pain out of painting.

CUSTOM TONE BASE for use with **NTS**®

CLEAR preserves fresh cut appearance of new wood

NATURAL enriches natural tones of wood

CEDAR rich cedar tone for pressure treated and restored weathered wood

REDWOOD rich redwood tone for pressure treated and restored weathered wood
